

Introduction :

This system is developed to manage and store records of items that need to be shipped to customers. Additionally, the system is equipped with a feature to generate labels in PDF format. With this system, the store team can easily generate labels based on the specific criteria set by the customers. All they need to do is input a few key pieces of data, and the system will automatically convert it into a label that is ready to use. This streamlines the entire process and makes it more efficient for the store team to manage their inventory and fulfill customer orders.
